

Will This OneGrill Rotisserie System Fit My Weber Grill Model?

This rotisserie system has been designed to fit the most popular Weber Grills available on the market today and in years past. This kit will fit all current and previous Weber Genesis Series Grills as well as the Spirit 300 series grills. This includes both "E", "S", and "EP" series (i.e. E310, E330, S310, S330, EP310, EP330) Additionally, this kit will fit many previous generations of Weber Grills. Due to the continuity of size for Weber brand grills many new Weber grills and older models such as select grills from the Silver B and C series will fit in the same manner. This kit replaces the popular Weber 7519 and many others due to a unique mounting bracket and spit rod design.

To Confirm Fitment To Your Grill You Will Need To Make 2 Observations:

The Width of the Grill Box & The Bracket Mounting Hole Pattern.

- 1) Observe the width of the lower grill box from the small "U" shaped cutout on each slightly elevated side panel (this will be where the spit rod rests during usage). Measure across the grill from one "U" cutout to the other. If the measurement falls between 25.25" - 23.25" or 27.5" - 26.5" continue to variable 2 below; if your grill is narrower or wider please see alternate OneGrill Weber Fit Rotisserie Systems.
- 2) Observe the mounting hole pattern on your grill. The mounting holes will be located on either the right side of the lower grill box or the left side but not both; the side orientation will play no role in fitment and is purely based on other features of the grill (i.e. generally the mounting holes are on the left side, but if a side burner is present on that side it may be on the right side of the grill box). You will note 2 holes. If the holes are located just below the horizon of the "U" cutout the bracket included with this kit will fit. If the holes are several inches below the horizon of the "U" cutout please see alternate OneGrill Weber Fit Rotisserie Systems
